Global shrimp market 2015

The global shrimp trade this year has been characterised by low demand. The US remains the market leader.

Seaweed production in Indonesia

Indonesia is the second largest seaweed producer in the world behind China. The government has launched various programmes to increase its production.

Public-private partnership in fisheries and aquaculture

Uganda has high potential for fisheries and aquaculture. The Government has initiated a win-win relationship with the private sector.

Adding fish to rural diets

Small indigenous fish can be subjected to simple processing methods to produce food products, which will help impoverished households to feed their families.

Portable ponds for communities

Water and fish (WISH) ponds have potential for increasing access of poor households to nutrient rich fish and vegetables. The system also allows continuous food supply

Ban on fishing discards

This article refers to the discards ban, written from the point of view of a professional with extensive practical knowledge of the UK's fishmeal industry, throughout the year.
